City of Rio Vista 2021 Consumer Confidence Report

The City of Rio Vista is committed to infrastructure upgrades on the water distribution system yearly by:

- Drinking Water Source Assessments and Well Head Protection of the City's wells
- · Monitoring current research and regulations on drinking water
- Water quality tests
- Water conservation Information

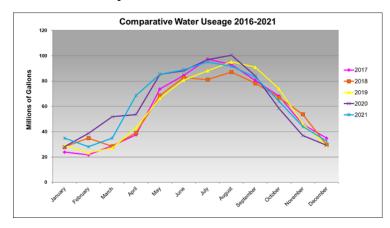

From the Source to the Tap

The City of Rio Vista's water is supplied from six ground water wells. The wells, tanks, treatment facilities and over 40 miles of distribution pipelines are operated and maintained by certified operators. The City's water supply is disinfected using chlorine in the form of Sodium Hypochlorite at an average chlorine residual of 0.5-1.5 mg/l (parts per million). These wells are the only source of supply available at the present time. To make sure your water is consistently safe, water is drawn from numerous locations throughout the water system and samples are taken on a weekly basis. More than 500 samples are drawn from numerous locations throughout the water distribution system. Samples are also taken from the wellhead prior to chlorination.

All sampling locations, and requirements are determined and approved by the California Department of Water Resources. Results from the approved testing laboratory are sent electronically to the State. These tests verify that our water supply continues to meet water quality standards established by State and Federal regulatory agencies.

This report, produced by the City, conforms to the federal regulation that requires each community water system to provide customers with annual information about the quality of the drinking water. This includes details about sources and quality; regulations that protect public health; programs that protect the water quality of our supply sources; and the treatment that assures our drinking water meets all Federal and State standards. We hope the information presented here enhances your understanding and gains your confidence in the quality and gains your confidence in the quality of the water you drink and use every day.

Total Water Pumped in 2021 – 756,204,000 Gallons

The City of Rio Vista Water Conservation Urgency Ordinance

This ordinance was adopted by the City Council on November 1, 2016 and went into effect on December 1, 2016. It states that

- a) No lawn/garden watering or other outdoor water use will be allowed between nine o'clock (9:00 am) and seven o'clock (7:00 pm) on any day.
- b) Subject to the limitations set forth in Section 17.68.025(A)(1)(a) users with odd-numbered street addresses shall use outdoor water only on Sundays, Wednesdays, and Fridays.
- c) Subject to the limitations set forth in Section 17.68.025(A)(1)(a) users with even numbered street addresses shall use outdoor water only on Saturdays, Tuesdays, and Thursdays.

2021 Consumer Confidence Report

Water System Name: CITY OF RIO VISTA	Report Date:	April 2022	
Tracer by bream trainer err a real real real real real real r	riopore z acc.	P	

We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 - December 31, 2021.

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo ó hable con alquien que lo entienda bien.

Type of water source(s) in use: According to SWRCB records, Wells 09, 10, 11 and 13 are Groundwater. Please see the Drinking Water Source Assessment Information section located at the end of this report for more details.

Your water comes from 6 source(s): Well 09, Well 10, Well 11, Well 13, Well 14 and Well 15 **and from 2 treated location(s):** As-Booster Station and WELL 10 AS/MN TREATMENT FACILITY

Opportunities for public participation in decisions that affect drinking water quality: Regularly scheduled Water and Wastewater Monitoring Committee meetings are held quarterly at Rio Vista City Hall council chambers.

For more information about this report, or any questions relating to your drinking water, please call (707)374-6451 and ask for Greg Malcolm.

TERMS USED IN THIS REPORT

Maximum Contaminant Level (MCL): The highest level of contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG):

The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Primary Drinking Water Standards (PDWS): MCLs and MRDLs for the contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Secondary Drinking Water Standards (SDWS): MCLs for the contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Level 1 Assessment: A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment: A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

ND: not detectable at testing limit

mg/L: milligrams per liter or parts per million (ppm)

ug/L: micrograms per liter or parts per billion (ppb)

pCi/L: picocuries per liter (a measure of radiation)

NTU: Nephelometric Turbidity Units

umhos/cm: micro mhos per centimeter

The sources of drinking water: (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- *Microbial contaminants,* such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are by-products if industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- Radioactive contaminants, that can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the USEPA and the State Water Resource Control Board (State Water Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Water Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Tables 1, 2, 3, 4, 5, 5a, 6, 7, 8 and 9 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Water Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old.

Any violation of MCL, AL or MRDL is highlighted. Additional information regarding the violation is provided later in this report.

Tabl	Table 1 - SAMPLING RESULTS SHOWING THE DETECTION OF LEAD AND COPPER									
Lead and Copper (complete if lead or copper detected in last sample set) No. of Samples No. of Samples PHG Typical Sources of Contaminant Sources of Contaminant										
Copper (mg/L)	(2019)	20	0.08	0	1.3	2	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives			

Table 2 - SAMPLING RESULTS FOR SODIUM AND HARDNESS									
Chemical or Constituent (and reporting units) Sample Date Average Level Detected Range of Detections MCL PHG (MCLG) Typical Sources of Contaminant									
Sodium (mg/L)	(2019 - 2021)	148	123 - 168	none		Salt present in the water and is generally naturally occurring			
Hardness (mg/L)	(2019 - 2021)	53.5	20.7 - 72.7	none	nono	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are usually naturally occurring			

Table 3 - DETECTION OF CONTAMINANTS WITH A <u>PRIMARY</u> DRINKING WATER STANDARD								
Chemical or Constituent (and reporting units) Sample Date Average Level Detected Range of Detections MCL [MRDL] PHG (MCLG) [MRDLG] Typical Sources of Contaminant								
Aluminum (mg/L)	(2018 - 2021)	ND	ND	1	II h	Erosion of natural deposits; residue from some surface water treatment processes		
*Arsenic (ug/L)	(2021)	9	5 - 15	10		Erosion of natural deposits; runoff from orchards, glass and electronics production wastes		

Barium (mg/L)	(2018 - 2021)	ND	ND - 0.10	1	2	Discharge from oil drilling wastes and from metal refineries; erosion of natural deposits
Chromium (ug/L)	(2018 - 2021)	ND	ND - 13	50.0	n/a	Discharge from steel and pulp mills and chrome plating; erosion of natural deposits
Hexavalent Chromium (ug/L)	(2014)	1.52	ND - 2.99		0.02	Discharge from electroplating factories, leather tanneries, wood preservation, chemical synthesis, refractory production, and textile manufacturing facilities; erosion of natural deposits.
Fluoride (mg/L)	(2019 - 2021)	0.3	0.2 - 0.5	2	1	Erosion of natural deposits; water additive that promotes strong teeth; discharge from fertilizer and aluminum factories.
Nickel (ug/L)	(2018 - 2021)	ND	ND - 23	100	12	Erosion of natural deposits; discharge from metal factories
Nitrate as N (mg/L)	(2019 - 2021)	0.6	ND - 2.1	10	10	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits
Nitrate + Nitrite as N (mg/L)	(2018 - 2021)	1	ND - 2.1	10	10	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits
Selenium (ug/L)	(2018 - 2021)	6	ND - 11	50	30	Discharge from petroleum, glass, and metal refineries; erosion of natural deposits; discharge from mines and chemical manufacturers; runoff from livestock lots(feed additive)
Gross Alpha (pCi/L)	(2018 - 2021)	2.33	1.17 - 3.94	15	(0)	Erosion of natural deposits.
Uranium (pCi/L)	(2018)	1.826	1.206 - 3.082	20	0.43	Erosion of natural deposits

^{*}Pre-treatment results well 10 and well 14

Table 4 - TREAT	Table 4 - TREATED DETECTION OF CONTAMINANTS WITH A <u>PRIMARY</u> DRINKING WATER STANDARD									
Chemical or Constituent (and reporting units)	Sample Date	Average Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Sources of Contaminant				
Arsenic (ug/L)	(2021)	8	5 - 10	10	0.004	Erosion of natural deposits; runoff from orchards, glass and electronics production wastes				
Hexavalent Chromium (ug/L)	(2014)	1.51	1.45 - 1.59	10	0.02	Discharge from electroplating factories, leather tanneries, wood preservation, chemical synthesis, refractory production, and textile manufacturing facilities; erosion of natural deposits.				

Table 5 - DETEC	Table 5 - DETECTION OF CONTAMINANTS WITH A <u>SECONDARY</u> DRINKING WATER STANDARD									
Chemical or Constituent (and reporting units)	Sample Date	Average Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Sources of Contaminant				
Chloride (mg/L)	(2019 - 2021)	74	34 - 157	500	n/a	Runoff/leaching from natural deposits; seawater influence				
Specific Conductance (umhos/cm)	(2018 - 2021)	810	658 - 1190	1600	n/a	Substances that form ions when in water; seawater influence				
Sulfate (mg/L)	(2019 - 2021)	53.7	35.0 - 72.6	500	n/a	Runoff/leaching from natural deposits; industrial wastes				
Total Dissolved Solids (mg/L)	(2018 - 2021)	482	420 - 680	1000	n/a	Runoff/leaching from natural deposits				
Color (Units)	(2018-2021)	ND	ND	15	n/a	Naturally occurring organic materials				
Iron (ug/L)	(2019-2021)	ND	ND –	300	n/a	Leaching from natural deposits; Industrial				
Manganese (ug/L)	(2019-2021)	10	30	50	n/a	Leaching from natural deposits				

Odor Threshold at 60° C (TON)	(2018-2021)	ND	ND	3	n/a	Naturally occurring organic materials
Turbidity (NTU)	(2018-2021)	ND	ND	5	n/a	Soil runoff

Table 5a - WELL 9 FOR TESTING/SAMPLING PURPOSES ONLY. WATER PUMPED TO WASTE NOT FOR DISTRIBUTION PURPOSES									
Chemical or Constituent (and reporting units)	Sample Date								
Color (Units)	(2018-2021)	3	ND -20	15	n/a	Naturally occurring organic materials			
Iron (ug/L)	(2019-2021)	ND	ND – 690	300	n/a	Leaching from natural deposits; Industrial wastes			
Manganese (ug/L)	(2019-2021)	21	ND - 100	50	n/a	Leaching from natural deposits			
Odor Threshold at 60° C (TON)	(2018-2021)	3	ND -16	3	n/a	Naturally occurring organic materials			
Turbidity (NTU)	(2018-2021)	2.3	ND - 13.1	5	n/a	Soil runoff			

Table 6 - TR	Table 6 - TREATED DETECTION OF CONTAMINANTS WITH A <u>SECONDARY</u> DRINKING WATER STANDARD								
Chemical or Constituent	Sample Date	Average Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Sources of Contaminant			
Iron (ug/L)	(2017 - 2021)	ND	ND - 200	300	n/a	Leaching from natural deposits; Industrial wastes			
Manganese (ug/L)	(2017 - 2021)	ND	ND - 30	50	n/a	Leaching from natural deposits			

	Table 7 - DETECTION OF UNREGULATED CONTAMINANTS									
Chemical or Sample Date Level Detections Range of Detections Level					Typical Sources of Contaminant					
Boron (mg/L)	(2019 - 2021)	1.2	0.9 - 1.7	1	Boron exposures resulted in decreased fetal weight (developmental effects) in newborn rats.					
Vanadium (ug/L)	(2018 - 2021)	3	ND - 14	50	Vanadium exposures resulted in developmental and reproductive effects in rats.					

Table 8 - ADDITIONAL DETECTIONS									
Chemical or Constituent (and reporting units)	Sample Date	Average Level Detected	Range of Detections	Notification Level	Typical Sources of Contaminant				
Calcium (mg/L)	(2019 - 2021)	10	5 - 12	n/a	n/a				
Magnesium (mg/L)	(2019 - 2021)	7	2 - 11	n/a	n/a				
pH (units)	(2018 - 2021)	8.23	7.73 - 8.7	n/a	n/a				
Alkalinity (mg/L)	(2019 - 2021)	249	220 - 270	n/a	n/a				
Aggressiveness Index	(2018 - 2021)	12	11.6 - 12.5	n/a	n/a				
Langelier Index	(2018 - 2021)	0.125	-0.3 - 0.7	n/a	n/a				

Table 9 - DETECTION OF DISINFECTANT/DISINFECTANT BYPRODUCT RULE							
Chemical or Constituent	Sample Date	Average Level Detected	Range of Detections	MCL (MRDL)	PHG (MCLG)	Violation	Typical Sources of Contaminant
Total Trihalomethanes	(2021)	8	ND - 12	80	n/a	No	By-product of drinking water disinfection
Chlorine (mg/L)	(2021)	0.80	0.20 - 01.5	4.0	4.0	No	Drinking water disinfectant added for treatment.
Haloacetic Acids (five) (ug/L)	(2021)	0.25	ND - 1	60	n/a	No	By-product of drinking water disinfection

Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts if some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers.

USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Lead Specific Language for Community Water Systems: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with the service lines and home plumbing. *City of Rio Vista* is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/lead.

Summary Information for Violation of a MCL, MRDL, AL, TT, or Monitoring and Reporting Requirement

Aluminum: Some people who drink water containing aluminum in excess of the MCL over many years may experience short-term gastrointestinal tract effects.

Arsenic: Some people who drink water containing arsenic in excess of the MCL over many years could experience skin damage or problems with their circulatory system and may have an increased risk of getting cancer.

Color: Color was found at levels that exceed the secondary MCL. The color MCL was set to protect you against unpleasant aesthetic affects due to color. Violating this MCL does not pose a risk to public health.

Iron: Iron was found at levels that exceed the secondary MCL. The Iron MCL was set to protect you against unpleasant aesthetic affects such as color, taste, odor, and the staining of plumbing fixtures (e.g., tubs and sinks), and clothing while washing. Violating this MCL does not pose a risk to public health.

About your Arsenic: For Arsenic detected above 5 ug/L (50% of the MCL) but below 10 ug/L: While your drinking water meets the federal and state standard for arsenic, it does contain low levels of arsenic. The arsenic standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. The U.S. Environmental Protection Agency continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

2021 Consumer Confidence Report Drinking Water Assessment Information

Assessment Information

A source water assessment was conducted for the WELL 09, WELL 10, and WELL 11 of the CITY OF RIO VISTA water system in December 2002. According to the Drinking Water Source Assessment and Protection Program's Source Water Assessments Public Access web page, the Public Water Sources WELL 13, WELL 14, WELL 15 of the CITY OF RIO VISTA water system number 4810004, do not have a completed Source Water Assessment on file.

Discussion of Vulnerability

All wells in the City of Rio Vista water system are currently online. Assessment summaries are not available for some sources. This is because:

- The Assessment has not been completed. Contact the local Department of Health Services (DHS) Drinking Water field office or the water system to find out when the Assessment is scheduled to be done.
- The source is not active. It may be out of service, or new and not yet in service.
- The Assessment was not submitted electronically. The site used to obtain Assessments only provides access to Assessment summaries submitted electronically.

Acquiring Information

A copy of the complete assessment may be viewed at: City of Rio Vista, Department of Public Works 798 St. Francis Way Rio Vista, CA 94571

You may request that a summary of the assessment be sent to you by contacting: Robin Borre Director of Public Works 707 (374-6451 x1116

For more information you may visit https://www.waterboards.ca.gov/drinking_water/DWSAP.html or contact the health department in the county to which the water system belongs as indicated on this following link: https://waterboards.ca.gov/drinking_water/programs/documents/ddwem/DDwdistrictofficesmap.pdf
